

The UK's just-in-time trade conveyor belt – still resilient and still evolving

UK and European supply chains already know the value of Dover to just-in-time trade. Geography will not change, but Dover's flexibility to meet future trade demands will ensure the efficiency of supply chains is maximised.

- The unrivalled location, capacity, frequency and efficiency of Dover's ferry operation on the shortest sea crossing provides the UK with essential trade resilience to get imports and exports to their destination in the shortest time.
- Add a new fully operational multipurpose cargo terminal with the opportunity for a new port-centric distribution facility and you have a new supply chain with fast and direct access to and from Europe on the shortest sea crossing.

It's a potent combination that provides UK and European logistics with the required resilience and flexibility to keep shops full, factories busy and prices low for consumers in the UK and across Europe.

We're ready to deliver Britain's future trading success.

CARGO

The Global Trade & Innovation Zone – delivering UK Freeports ambitions

Global Trade & Innovation

The Global Trade and Innovation (GTI) Zone will:

- Support the UK's post-COVID economic recovery by enabling manufacturers to benefit from the customs, tariffs and taxation benefits offered by Freeport status without having to re-locate.
- Help protect manufacturers following the end of the transition period.
- Build on the strength of the UK's leading manufacturers and existing economic clusters to increase global competitiveness and maximise regeneration opportunities.
- Create a strong, international profile to attract inward investment.
- Deliver a network of support for SMEs and start-ups to drive business expansion and export growth.
- Provide an effective platform to drive innovation in secure and sustainable trade, including development of the UK's first Zero Emissions Logistics Corridors.

Join us and get in the zone
for global trade and innovation.
