

TEVVA

Introducing Tevva.
The no compromise eTruck

No compromise on your duty cycle

Tevva eTrucks match the duty cycle and performance of comparable diesel vehicles at lower overall cost today and with zero or near zero emissions, and with minimal reduction in payload. The electric drivetrain uses Tevva's energy management and on-board recharging (where needed) to provide extended range and optimised use of the battery.

Visit Tevva.com to find out why a Tevva can fully replace a diesel truck

Clean air delivered today

Real impact on air quality and the climate emergency are only possible if the solution is one that your business can implement. Household names in logistics are choosing Tevva's unique technology to place themselves at the forefront of clean freight, to meet carbon emissions regulations and lower their carbon footprint.

Lower costs come as standard

With Tevva, the move to fleet electrification comes with a cost saving of approximately 20% - our unique on-board charging enables maximum use of the full battery charge which, when combined with dramatically reduced brake wear, maintenance and fuel costs, results in us being able to offer a significant reduction in total cost of ownership compared to an equivalent diesel.

Find out about Tevva's transformational business case at www.tevva.com

Certainty. Delivered by Tevva.

Our mission was to build an eTruck that could simply take the place of a diesel. Without compromise. What we have developed actually outperforms both diesel and simple EV oncost and total environmental benefits, with in most cases, zero operational compromise.

The Tevva eTruck with its fully integrated technologies is designed and built for robustness, durability, safety and compliance. Integrate a Tevva eTruck into your fleet on an extended trial through the Air Quality Champions Programme.

Find out more at www.tevva.com

Four core technologies combining to produce an eTruck without compromise.

TEVVA Drive

Tevva Drive is a world class advanced control system which translates driver input into seamless torque delivery with unsurpassed energy efficiency, reliability and safety.

Features: Anti-roll back system, regenerative braking system, electronic speed limiter, smart power steering control, smart air compressor control

TEVVA Power

Tevva Power manages the electrical energy storage and distribution through high efficiency battery cells, and a state of the art battery management system. A 3-tier safety framework ensures operator safety. Rigorously tested to UNECE Reg 100 Rev 2 Part 2.

Features: Cobalt-free, prismatic, low-cost, Lithium Iron Phosphate, high-efficiency battery cells, 3 tier safety strategy

TEVVA Link

Tevva Link is the brains of the eTruck - an embedded control system which offers optimised use of the energy storage and range extender, enabling full autonomous control, and delivering a full suite of information to the driver and telematics to a central database.

Features: Bi-directional data transfer, on-board GPS, on-board mobile communications, on-board non-volatile read only memory

TEVVA ReX

Optional: Tevva Range Extender is an on-board charger designed to eliminate range anxiety and allow maximum battery utilisation.. Tevva Rex is a fully autonomous system that responds to geo-fenced designated clean air zones.

Features: Fully autonomous, geo-fence governed

Tevva is a world leader in the development of long-range, self-charging electric trucks.

Our eTrucks and technologies outperform simple EVs on operational capability, on cost and on total environmental benefits.

By matching the duty cycle performance of comparable diesel vehicles at lower overall cost and with zero or near zero emissions they are a fully practical solution available to order now.

Tevva is far more than a great concept. Our UK based engineering team is delivering against the most rigorous engineering standards such as ISO26262 and UNECE Reg 100 Rev 2 Part 2.

Tevva is 100% focused on safety, durability and reliability.

To know more or evaluate a Tevva eTruck in your fleet through our EU demo programme then please either call us on **+44 (0)1245 373 553** or email **sales@tevva.com**
